## Education

### Indian Institute of Technology Gandhinagar

Bachelor of Technology in Artificial Intelligence

2024 – 2028

CPI: 6.46

## Experience

### Flutter Developer – INSIIT

2025 – Present

Official Student Application, IIT Gandhinagar

- Developed Flutter features for the official IIT Gandhinagar student application used by over 1,000 students, working within a collaborative Git workflow with branch-based reviews.
- Implemented Android Home Screen Widgets by integrating Flutter with native Android (Kotlin, XML) via the `home_widget` package, giving students quick access to dynamic campus information from their device home screen.
- Configured background synchronization and local data persistence using `WorkManager`, `SQLite`, and `SharedPreferences` to keep widget content reliably updated without user interaction.

## Projects

### Anar X Python · TensorFlow · Keras · OpenCV · Computer Vision · Deep Learning · AGMARKNET

Demo | GitHub

- Built and trained a **multi-task deep learning model** on 5,099 real pomegranate images for multi-class disease recognition and severity estimation, using shared feature extraction with separate prediction heads.
- Engineered the end-to-end **computer vision inference pipeline**, covering image preprocessing, model inference, confidence scoring, disease identification, and generation of disease-specific treatment recommendations.
- Combined **computer vision with real-time agricultural intelligence** by integrating government AGMARKNET market APIs, enabling farmers to compare pomegranate prices across mandis and make data-driven selling decisions.

### Aera Messenger Flutter · Firebase · Supabase · Gemini API

Demo | GitHub

- Developed a cross-platform real-time messaging application using Flutter; used Firebase Firestore for live message synchronization and Supabase for media storage and user data persistence.
- Integrated Google Gemini API as an in-chat assistant by wrapping API calls in a dedicated service layer, separating AI logic from the Flutter presentation layer via a clean client-server interface.
- Implemented optimistic UI updates and local message queuing so the app remains functional under poor or interrupted network conditions.

### SmartSpend AI Next.js · TypeScript · Supabase · PostgreSQL · Gemini API · Zustand

Demo | GitHub

- Built a full-stack personal finance tracker as a Progressive Web App using Next.js and TypeScript; implemented offline-first support with next-pwa and Service Workers for reliable use without connectivity.
- Configured PostgreSQL row-level security policies and Supabase Auth to ensure strict per-user data isolation; integrated Gemini API to AI-assisted spending analysis and budgeting recommendations from transaction history.
- Managed client-side state with Zustand and built responsive expense dashboards that synchronize automatically when connectivity is restored.

### Priora Next.js · TypeScript · Supabase · PostgreSQL · Gemini API

Demo | GitHub

- Built an AI-powered productivity platform that helps users organize tasks, prioritize work, and plan around upcoming deadlines using Next.js and TypeScript.
- Integrated Google Gemini API to turn user tasks and deadlines into practical priorities and personalized execution plans.
- Connected the application to Supabase and PostgreSQL for user authentication and persistent task data, keeping AI recommendations tied to the user's workflow.

## Technical Skills

### Languages

Python, C++, C, Dart, TypeScript, SQL

### AI / ML

Machine Learning, Deep Learning, Computer Vision, TensorFlow, Keras, Scikit-Learn, Optuna, TensorFlow Lite, Google Gemini API, Gemma

### Frameworks & Libs

Flutter, Next.js, React, Tailwind CSS, Pandas, NumPy, OpenCV, Framer Motion, Recharts

### Backend & DB

Firebase, Supabase, PostgreSQL, REST APIs

### Developer Tools

Git, Docker, Linux, Android Studio, Neovim, WorkManager, SQLite

### Embedded Systems

ESP32, Nordic nRF52840, BLE

## Achievements

• JEE Main 2024 — **97.48 percentile**

• MHT-CET 2024 — **98.60 percentile**
